

DST Output Case Study

Securing Financial Data with Advanced Encryption

Discover how DST Output's **advanced encryption** helped a large asset management company **protect** its shareholders' **confidential information**.

The Challenge

One of the largest asset management companies in the U.S. decided it was time to implement advanced encryption on their offline presentment CDs and DVDs. A decade-long relationship and successful completion of several complex projects led to the joint collaboration between DST Output and the financial company.

The Solution

DST Output worked closely with the company to incorporate 256-bit encryption into their CD/DVD offering. In addition to the assurance of added security, the newly encrypted CD/DVD offers:

+	Encryption that uses the U.S. Government's National Institute of Standards and Technology, 256-bit advanced encryption standard
+	A robust search engine, enabling users to quickly locate documents
+	Offline presentment documents that resemble printed statements
+	Enhanced user authorization that does not undermine the CD/DVD's usability

The Results

Our client now delivers CD/DVDs secured by advanced encryption, providing the company and its clients with an added layer of security to balance the need for portability and ease of use with the necessity of limiting access to authorized users.

About DST Output

DST Output provides integrated print and electronic statement and billing output solutions to many of the world's largest financial services, communications, insurance, healthcare, and utilities companies. We produce more than 2.9 billion customer communications, delivered via postal service, express delivery and over the internet. DST Output is a wholly owned subsidiary of DST Systems, Inc.
